Variable sized representation of sentence (LSTM/RNN) := "dynamic representation" (Cohn et al. 2016)

RNN Applications: Introduction of (Yu, Lee, and Le 2017)

"Natural language inference (NLI; also known as recognizing textual entailment, or RTE) is a widely-studied task in natural language processing, to which many complex semantic tasks, such as question answering and text summarization, can be reduced (Dagan et al., 2006) (Dagan, Glickman, and Magnini 2006)." from: (Gururangan et al. 2018)

Modeling human's attention while reading has been studied in the field of cognitivepsychology (Reichle et al., 2003). (Seo et al. 2017)
